

# PRODUCT SPECIFICATIONS - SANDTRAPPER

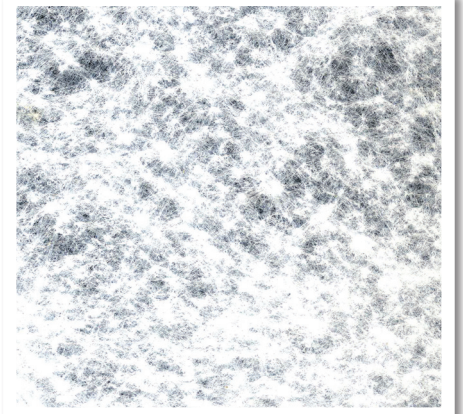

## 1.0 DESCRIPTION

The Sandtrapper GEO nonwoven material (matrix) is constructed of polyethylene fibers heat-fused to each other during fabrication. It is a geotextile designed strictly for contamination control.

## 2.0 PROPERTIES

| Physical Property                 | Value          |
|-----------------------------------|----------------|
| Color                             | White          |
| Weight - oz. sq. yd. / kg. sq. m. | 2.7 / .064     |
| Thickness (mils)                  | 23             |
| Fiber Type                        | Polypropylene  |
| Binder                            | n/a            |
| Area Per Roll - 102" (2.59m)      | 8,500 (789.67) |

## 3.0 USE

Sandtrapper GEO is used for golf course bunkers on the based of the bunker only in order to combat sand contamination. It is used along the bunker bases and carries into bunker drainage. It can be used in hybrid configurations with other styles.

## 4.0 CONSTRUCTION

Sandtrapper GEO is a matrix of polyethylene fiber.

## 5.0 GREEN INITIATIVE

Manufacturing plants operate under EPA approved Clean Air Permit.

## 6.0 PRODUCT CARE

To prolong the life of the Sandtrapper GEO material (matrix), it is recommended that the product be stored indoors.
