

SPEED UP YOUR INSTALLATION

THE PNEUMATIC CHOICE

The EC Blaster represents a major breakthrough in cost savings for all users and installers that require sod staples for product installation. Used in construction applications for more than 10 years, the EC Blaster employs the proven performance and power of pneumatics in its operation.

Coming with a one-year parts and labor warranty, the EC Blaster sets galvanized 11 gauge wire staples with 100 lbs of air pressure, far more powerful than the conventional hand and mallet application of one staple at a time. During the last 10 years, the EC Blaster has set millions of staples in less time and for less money.

EASY TO HANDLE & USE

Weighing in at a svelte 10 pounds, the EC Blaster is equipped with a number of time-saving features. It is easily attached to its air supply using quick connect fittings. Just connect the air hose to the EC Blaster and you're ready to work.

And loading the clips of 50 staples each couldn't be easier. Just slide the spring-loaded pusher, drop the staples into the holder, release the pusher, and you're ready to go. The stainless steel bottom guide keeps the staples in line for setting.

The EC Blaster is also equipped with a unique, circular, presser foot that prevents the tool from snagging the plastic or jute nettings that hold the erosion control blankets together. Natural geotextiles like jute mesh and coir matting are installed with ease.

SPEED UP YOUR INSTALLATION

THE RIGHT FEATURES

In the rare case of staple jamming, just a quick release of the front nosepiece will clear the problem in a few seconds. Just snap the piece back into position and you're ready to go.

The EC Blaster installs blankets and mats with quick-fire efficiency. And whether it's uphill, downhill, or cross slope, the EC Blaster performs, setting staples at a pace as fast as one per second.

It doesn't take much figuring to realize the dramatic labor savings that the EC Blaster can generate. Such savings directly impact the bottom line and can turn a good project into a great one.

The EC Blaster is a safe tool and is easily operated. It cannot fire unless the presser foot is depressed on the ground and the trigger is pulled, thus preventing misfires and injury.

The EC Blaster is fitted with a side handle that can be mounted on either the left or right side of the tool for increased leverage when the operation requires it. The molded rubber grip allows for solid, comfortable control.

The case for the EC Blaster is clear. With the constant rise of labor costs and the high cost of workers comp cases, the EC Blaster offers contractors and installers a safe and foolproof way to increased profitability through significant efficiency and lower labor costs.

INDIAN VALLEY PRODUCT LINE

And remember, Indian Valley Industries is your one-stop shop for erosion control. Founded in 1940, IVI is an environmental company that specializes in the right products to meet the ever stringent guidelines of State and Federal laws.

Erosion Control Blankets and Matting, Logs and Wattles, Geotextiles, Geogrids, BMP's, Storm Water Management, Worksite Supplies and Spill Containment. IVI also manufactures all styles of silt fence -- Construction Grade, DOT, with wire or polypropylene mesh, or rolled fabric for automatic silt fence installation.

We've built our business on service, with fast product fabrication, delivery and a reliable logistics network. Indian Valley is here to serve you.

SPECIFICATIONS

Characteristic	Description
Weight	10 lbs
Air Requirements	110 psi
Connection Requirements	3/8 in quick-connect fittings connected to a high-pressure air hose
Staple Requirements	pecially designed 11 gauge galvanized steel sod staples glued in clips of 50 (available from Indian Valley)
Stapler Control	Ergonomically designed grip with reversable control handle
Staple Capacity	100 staples - 2 clips of 50
Staple Supply	20 clips per carton (1000) available from Indian Valley Industries, Inc.
Warranty	One Year Parts & Labor
