

## Quick Testing Results & Product Characteristics

Bunker liners are not equal and the choices between them are quite different.

Sandtrapper was introduced over 8 years ago for the purposes of combating washouts and contamination in bunkers. Specific properties like fiber denier, binder composition, and matrix were considered in producing Sandtrapper, a bunker liner that performs to the highest standards.

IVI-GOLF recognizes incorrect claims made by competitive products – specifically in claims regarding composition, performance, and durability. But when you take a closer look, it's easy to see why Sandtrapper stands alone and at the top.

Below are dramatic test results using accepted geo-textile tests relevant to erosion control and soil stability. Sandtrapper has greater strength through heavier fibers and more aggressive binding agents, drains water faster at a rate of over 2-1, and is 75% more resistive to compression. The conclusions are clear. Sandtrapper delivers the performance you expect and has the numbers to prove it.

Sandtrapper II	Property	The Other Guys
200	Fiber Thickness (Denier)	25/45
16 oz sq yd	Weight	12 oz sq yd
.81 inch	Thickness	1.0 inch
59.4 lbs	Tensile Strength	30 lbs
43.5 lbs	Compression	25 lbs
7.22 sec-1	Permittivity	3.5 sec-1
567.2 gpm/ft <sup>2</sup>	Flow Rate	250 gpm/ft <sup>2</sup>
10 years	Warranty	5/10 years
4 years	Zero Replacement Cost	1 year
